

Biochar

A climate and agricultural solution, ready for scale

Glasgow – 10 November 2021

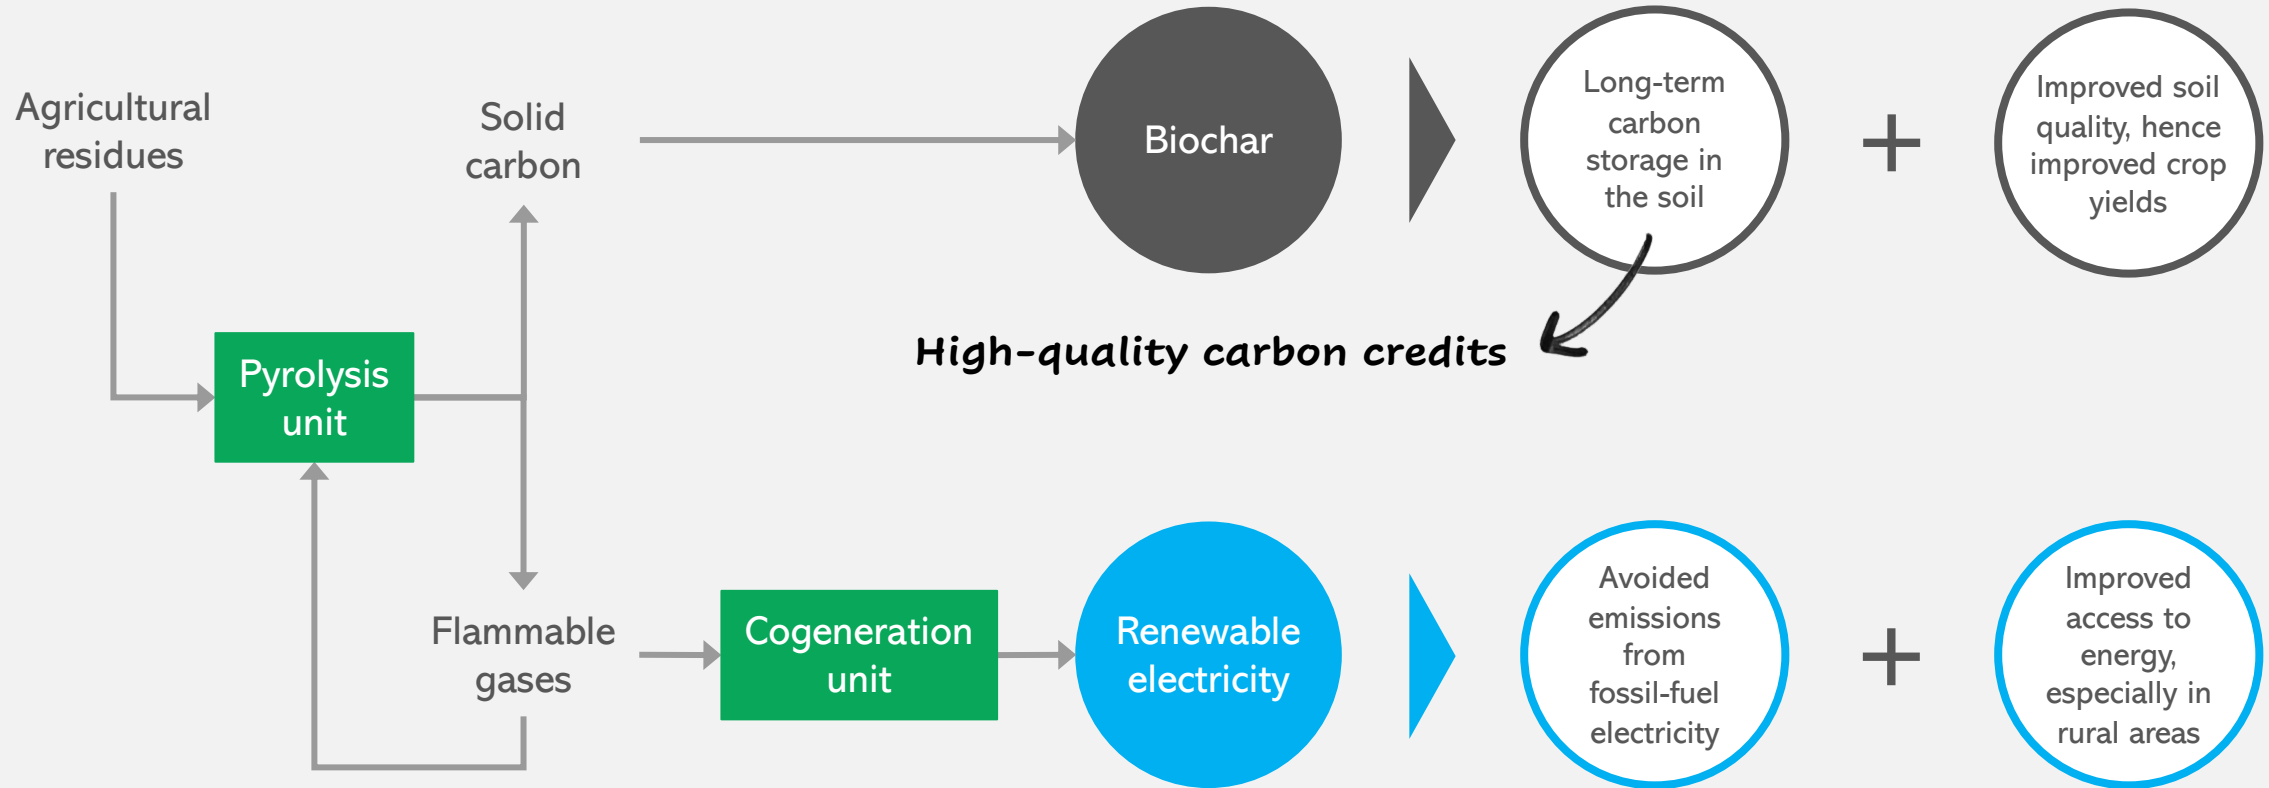

What is biochar?

- > Solid, charcoal-like product with high carbon content
- > Produced from renewable waste biomass
- > Using a pyrolysis process
- > Mixed with topsoil as a soil amendment

NetZero's model brings strong climate and social benefits

NetZero's ambition is to scale biochar – fast

By operating in tropical countries

- › Massive amounts of unused crop residues
- › Maximised soil benefits
- › Maximised social impact

By replicating a highly efficient model

- › Mid-scale production units
- › Proprietary technology
- › End-to-end approach

1,000,000+

tonnes of CO₂ annually removed before 2030

Our first site in Cameroon is starting this month
